POS HOST SERVICE FOR PRICING

UNFI's POS Host Service modernizes your pricing process while saving you time and labor. Eliminating the need to manually key in price changes will improve data accuracy and allow your employees more time to focus on serving your shoppers.

Our user-friendly Host file reduces pricing errors that not only have a negative impact on shopper trust and loyalty, they can hurt your bottom line.

How it Works
- Store-specific pricing is collected and processed on a weekly basis. This data includes any price changes, temporary price reductions, ad pricing, first-time buy records, and more
- Your store downloads pricing information from our portal via myUNFI
- The software separates the data into batches where it is categorized by format

Retailer Benefits
- Quick updating to price files
- Reduce time spent manually entering price data
- Improved price accuracy
- Increased profitability

More Enhancements Available
- Ability to sort price changes by category or aisle sequence to save hanging time
- FSA Flags: Adds a flag to items that qualify as Flexible Spending Account (FSA) purchases

Retailer Requirements
- Retailers must subscribe to UNFI Retail Pricing to use Host Service for Pricing.
- SIL Interpreter required on your back-office computer to process pricing information into batches
